ENGINEERING DATA

- Capacity tables on page 3 are for horizontal air throw. To convert throw data from horizontal to vertical throw, multiply x .7. Multiply S.P. drop indicated in tables x .8.
- N.C. sound levels indicated are based on power level (LW) $\text{re } 10^{-12}$ watts minus an 8 dB room allowance in all octave bands.
- Balancing: Utilize Alnor Probe 2220, 2220-A or 6070 as indicated to obtain average outlet velocity (Va.).
